

Python Homework Web Scrapping BS WEEK 4

Data Science
Academy

HOMework

Description: You are working as a Data Scientist in an Azerbaijani Real Estate Agency. You are tasked to gather data about the house properties in the country using web-scraping in order to create a model in the future.

You are asked to scrap 'bina.az' and get the data out of the main page. The data should give information about the location of the property, the link of the announcement, date and time published and the price of the property.

Website Link: <https://bina.az/>
