

Python Case Study Web Scrapping WEEK 4

**Data Science
Academy**

CASE STUDY

Description: You are asked to scrape the reddit site. Take any subtopic of reddit and scrape 4 main concepts from the site:

- 1) Header of the each posts
- 2) Votes of the each posts
- 3) Dates of the each posts
- 4) Links of the each posts

Finally, create a csv file which contains all mentioned columns. Your result should be nearly same as below.

| | Domains | Votes | Dates | Links |
|---|---|-------|----------------|---|
