Python Homework
Time Series

WEEK 11

Data Science Academy

Disclaimer: Dataset and homework are made up for educational purposes.

Dataset: wiki_machine_learning.csv

Description: Data represents how many times Wikipedia page of Machine Learning was read during some period of time. The data is presented in csv format as follows: date, count, lang, page, rank, month, title. Null values of count column are identified with 0, please remove them while preprocessing.

Task: You are asked to create a model using Facebook Prophet and Neural Prophet algorithms to predict how many times the article will read for the future 30 days (count column).
